

# May Sky Map

Latitude 30° south between 7 and 8pm

### How to use this map

Facing either south or north, look at the appropriate star map. Your view of the sky should roughly match the major stars and constellations shown. You'll see more stars as your eyes get accustomed to the dark, so wait for 10-15 minutes if you're having trouble spotting the constellations. (For full sky maps go to [skymaps.com](http://skymaps.com)).
